

Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Yes	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	They use Python code for clients. Based on their performance of client side, it's normal. And their Py files are short so they're easy to read. Basically, these files are just classes and member functions.	
Implementation	is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	Their Py files are short and code is clean enough. (I'm not sure what's useful abstractions)	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	Yes, they performed unit tests. It seems it was going well. They're readable since they have a user interface for it.	
Requirements	Does the code fulfill the requirements?	Yes, they meet all of them	
Other	Are there other things that stand out that can be improved?	It seems that they have bugs to fix (A bug related to the client side shown)
