Category	Description	Reviewers Comment	Action taken by reviewed group
Build	Could you clone from Git and build using the README file?	Yes, but only when I switch out of the master branch, this was not made clear in the readme	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	The code was uncommented but I got a general idea of what was going on.	
Implementaton	is it shorter/easier/faster/cleaner/safer to write functonally equivalent code? Do you see useful abstractons?	I am sure this code would be faster in a different language but I believe that this is beyond the scope of this project. From what I can see they are using OOP well.	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	Not that I can see. I think it is fine to not have them at the moment, but next year when connecting the devices and the website tests will be necessary.	
Requirements	Does the code fulfill the requirements?	Yes but It does seem a bit unpolished.

Other	Are there other things that stand out that can be improved?	Security could be improved. HTTPS does not provide complete security, auditing user cookies and the api would be a good idea. However the password hashing is good.	

Overall score 3/4
